

Ivanpah Mountains (French) Fluorite Prospect, Ivanpah Mountains

14N 14E Sec. 08 SBM

35.31190999960

-115.50774000000

This mine is in the southern Ivanpah Mountains. Quartz monzonite porphyry contains irregular, partly sericitized zone 75 ft. in maximum dimension. Fluorite is found along shears within the sericitized zone. This is a prospect. (Crosby and Hoffman, 1951, p. 636)

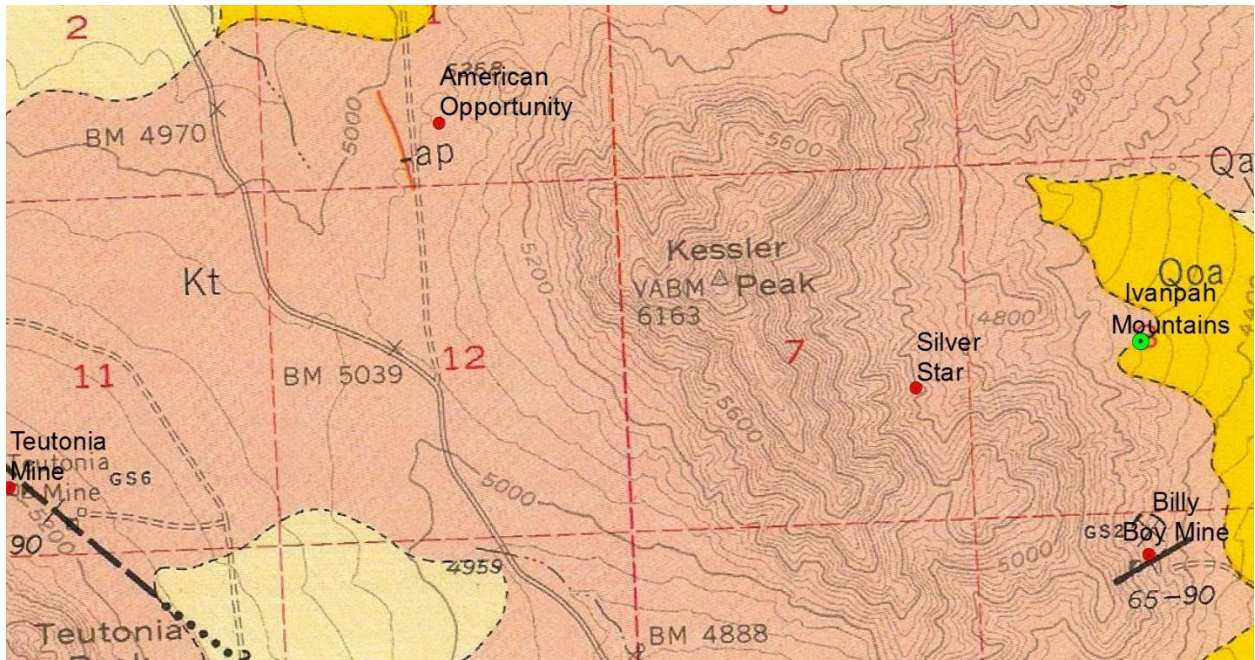

Figure 1. Geologic map of the Ivanpah (French) mine and surrounding area. From Evans, 1971.

The Ivanpah is north of the Billy Boy Mine, and east of the Silver Star Mine.
